EDUCATION

Izmir Institute of Technology

B.Sc. in Computer Engineering (Transfer Student)

Urla, Izmir, Turkey

Sept. 2023 – Sept. 2026

Izmir Katip Celebi University

B.Sc. in Computer Engineering (GPA: 3.28)

Cigli, Izmir, Turkey

Sept. 2022 – Aug. 2023

EXPERIENCE

Jotform

Frontend Support Engineer

Urla, Izmir, Turkey

Nov. 2025 – May 2026

- Continued working on Jotform Tables with React, Redux and PHP.
- Solved 50+ bug tickets, working with both legacy and recent code.
- Helped my team in integrating AI functionalities to Jotform Tables.
- The contributions were taken live on a platform with 35M registered users.
- Received constant feedback from my mentor.

Frontend Developer Intern

June 2025 – Aug. 2025

- Developed a new feature for Jotform Tables, allowing users to import external files (Excel, CSV) to their existing tables.
- Engineered frontend logic using React.
- Implemented Figma design wireframes to the codebase with SCSS stylesheets.
- Utilized Redux and Redux-Saga for global state management.
- Improved soft skills by working with a team of interns, also received extensive mentorship.
- Navigated and contributed to a large-scale enterprise codebase.

Parayuz

DevOps Engineer

Urla, Izmir, Turkey

Sept. 2025 – Feb. 2026

- Participated in a grassroots startup environment where we developed a financial assistant application as a team of students.
- Deployed the application combining three services utilizing AWS EC2, Docker Compose, and nginx.
- Created a development Docker image using Docker Compose with hot-reload functionality to speed up development.
- Set up auto-deploy functionality for certain Git branches using GitHub Actions and shell scripting.
- Utilized AWS ECS to deploy microservices with a load balancer.
- Wrote shell scripts for CI/CD pipelines.
- Helped with development work in both the frontend and the backend, using Next.js, FastAPI and Spring Boot respectively.

gardostech

Junior Software Developer

Alsancak, Izmir, Turkey

Mar. 2025 – Sept. 2025

- Worked on the company management app Krang following Agile practices.
- Built a demo app which utilizes LLMs to read and extract receipt data from a photo taken with the device camera.
- Worked with technologies like Next.js, TypeScript, and Tailwind CSS for frontend development.
- Implemented a PDF generator on the Nest.js backend to generate PDFs from HTML templates using Puppeteer and Handlebars.
- Developed a task management module integrated with other modules from scratch with isolated notifications using user groups.
- Revamped the application's notification architecture with the Nest.js backend, implemented mention notifications for the task management module.
- Created an in-app messaging module with notifications, utilizing WebSocket.
- Worked on Nest.js RESTful APIs and the Prisma database schema of the application.

Izmir Biomedicine and Genome Center

Software Developer Intern

Balcova, Izmir, Turkey

May 2024 – Jan. 2025

- Designed an Android application for cell counting using image processing with Flutter.
- Built an image processing server communicating with the app using MATLAB, Python and Flask.
- Gained experience in applying software solutions to biomedicine.

IZTECH Software Society

Frontend Developer

Urla, Izmir, Turkey

May 2024 – June 2025

- Built a form application with Next.js and MongoDB to streamline event attendee management.
- Developed interactive projects, including a password game and a digital card app, using Next.js.
- Successfully converted a legacy project which used React and JavaScript to more modern technologies like Next.js and TypeScript.
- Collaborated with a team of 10+ developers on an educational app.

PROJECTS

CAKS: City Attraction Kitchen Stay | [GitHub](#)

Spring 2025

AI-Powered Travel Recommendation Application (CENG 318 Final Project)

- Developed a responsive web application using Next.js to provide context-aware travel itineraries.
- Integrated the Gemini API to dynamically generate customized attraction, culinary, and accommodation recommendations.
- Implemented an optimized Supabase caching layer to reduce API latency and manage computational overhead efficiently.
- Deployed the finalized platform on Vercel to ensure seamless continuous integration and delivery.

IZTECH Graduation Management System | [GitHub](#)

Spring 2025

Web-Based Graduation Tracking Application (CENG 316 Final Project)

- Engineered a robust full-stack graduation compliance and tracking system utilizing Next.js and a PostgreSQL database.
- Designed data models and managed migrations securely by utilizing Prisma ORM for efficient relational mapping.
- Implemented robust user authentication flows with custom Next.js middleware to securely isolate student, advisor, and admin roles.
- Deployed the finalized platform on Vercel to ensure continuous integration and delivery.

LEADERSHIP & ACTIVITIES

IZTECH Software Society

Urla, Izmir, Turkey

Organizational Co-Leader

Sept. 2024 – Feb. 2025

- Attracted 800+ new members during a university event, leading recruitment efforts.
- Organized large-scale events, including a welcome party with 300+ attendees and a code night with 50+ participants.

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, Java, PHP, Python, C, Shell, Dart

Frameworks & Libraries: React, Redux, Redux-Saga, Tailwind CSS, SCSS, Next.js, Nest.js, FastAPI, Spring Boot, Flutter

Tools: Linux, Git, Docker, Docker Compose, Nginx, GitHub Actions, WebSocket

Databases & Cloud: PostgreSQL, Prisma ORM, MySQL, MongoDB, AWS (EC2, ECS), GCP, Vercel

Languages: Turkish (Native), English (Professional Working Proficiency)
